

ACM133 Fingerprint Controller Module

- for access control

Convenient

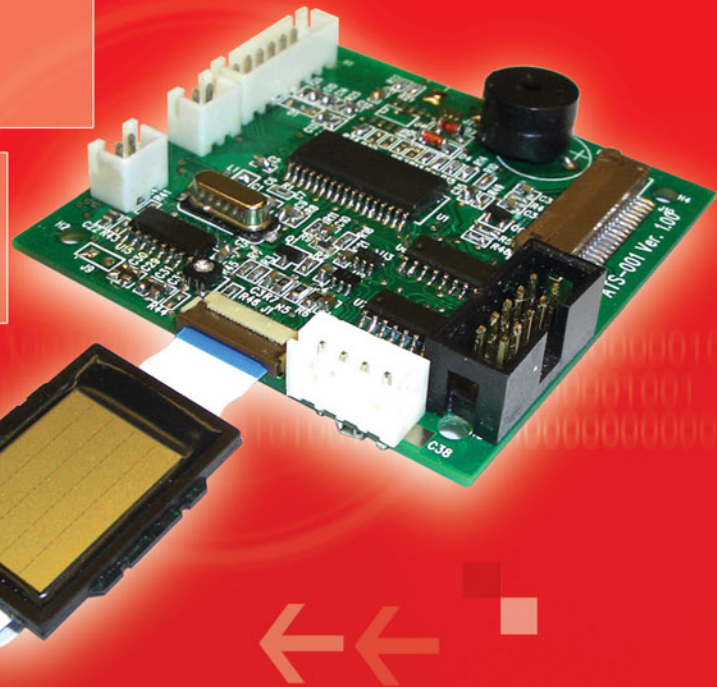

No more worries about forgetting passwords or losing keys/access cards

Secure

Proven techniques to uniquely identify a person

Fast to market

Minimum wiring connections for simple manufacturing assembly

The ACM133 fingerprint controller module is a standalone, battery-operated lock-controller for physical access control applications. It employs the most advanced fingerprint scanning and recognition technology that can accurately authenticate the user's identity.

The module is specially designed to minimize power consumption and hence extend the battery life.

ACS specializes in designing man-machine interfaces that are intuitive to operate. We can work with our partners to customize our design to suit their needs.
