

# SINETICA

## Enterprise Device Manager Device Management and Control

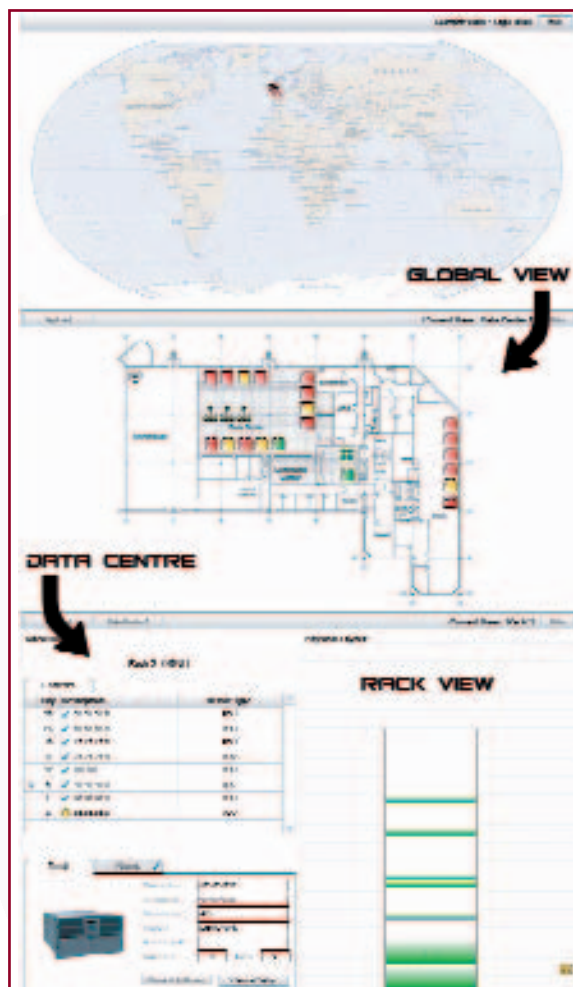

Enterprise Device Manager is an enterprise-level device monitoring, control and asset management application. This web-based application allows users to monitor and control hundreds or even thousands of devices from a single console. Through its secure web interface, you can view the infrastructure from any browser within the company intranet.

### Attractive, Intuitive Layout

- Real-world representation of your infrastructure
- Import your own data center layout
- Drill down to the rack level

### Easy to use

- Clear, easy to read intuitive screens using Macromedia Flash with real-time updating
- Automatically discovers supported devices
- Minimal SNMP knowledge required (no MIB compilation)
- Configurable hierarchy allows you to easily group devices by location, type or function

### Logging

- Provides individual device log files for trending and event logging purposes
- Users can easily manage inventory and create and save custom reports

### Intelligent Alarm Processing

- Only active alarms are displayed in the alarm viewer (all alarms are saved to log file)
- Recognizes when an alarm condition has cleared and automatically updates the alarm display and event log

### Global sets

- Configure multiple devices with a single click

### Multi-protocol Support

- SNMP
- Telnet
- Web (secure and non-secure)
- XML
- Modbus

**SINETICA...**  
understanding the data  
centre requirement.

Power, temperature,  
access control,  
and all other remote site  
monitoring needs.

## Enterprise Device Manager

### Device Management and Control

#### FEATURES

Device Discovery	Automatically discovers SNMP devices, Business Edition UPS software, secure and non-secure Web servers, Telnet devices and more. Support is also included for manually adding non-discoverable devices
Topology Layout	Configurable hierarchy structure allows you to easily group devices by location, type or function. Support for nested groups allows you to design a topology that fits your needs
Advanced Layout View	Create customized layouts by choosing the size and position of device icons. Import your own background images to fully customize your layout
Detailed Rack View	Drill down to the rack level to view rack contents and status of all rack devices
Real-Time Alarm Monitoring	Macromedia Flash interface provides real-time updating without screen refresh
Accessible from any Browser	View the status of your infrastructure from any browser on your company intranet
Security	Secure Socket Layer (SSL) support for web security
Extensive Reporting	View summary and detailed event logs, inventory reports, and device parameters. Create and save custom reports. Configure recurring reports to be sent automatically via email

Intelligent Alarm Processing	When an alarm condition clears, the active alarm will be automatically removed from the alarm viewer. There is no need to manually clear every alarm as is required for many network management systems
SNMP	Notification Send SNMP traps to multiple trap receivers when events occur
Broadcast Notification	Send broadcast messages to multiple recipients when events occur
Email/Pager Notification	Send email or alphanumeric pages to multiple recipients when events occur. Select working days and hours for email/pager recipients so they will only receive notification when it is appropriate
Alarm Escalation	Escalate alarms if not resolved after a selected period of time
Centralized Configuration	Configure hundreds of devices at the same time using Enterprise

#### SYSTEM REQUIREMENTS

Operating Systems	Supported Windows 2000 (service pack 4 or higher) Windows XP Professional (service Pack 1 or higher) Windows 2003 Server Enterprise Edition
Web Browsers Supported	Internet Explorer 6.0 (Service Pack 1) Macromedia Flash 7.0
Database	MSDE 2000 (Service Pack 3) – included with the software
