## Heterogeneous Configurations with Array Controllers

Heterogeneous configurations are those storage configurations supporting varying operating systems and SCSI adapters. Figure 1 is an example of a heterogeneous system supplying storage devices to both a DIGITAL UNIX system and a Windows-NT system.

**Figure 1 Sample Heterogeneous System**

While the array controller will appear to be dedicated to each system separately, the SCSI bus connection will continue to be a single physical bus. In addition to standard SCSI configuration rules, the use of tape devices on a controller shared between systems should be restricted. As with any multi-host configuration, a SCSI reset issued by one host may impact the state of the other hosts' outstanding commands. Since SCSI resets can cause the tape media to rewind while in use, it is recommended that tape devices not be attached to array controllers used in multi-host configurations.

Support for Heterogeneous configurations with HSZ70 controller based solutions can be offered in the following operating systems and versions.

<b>Operating System and Adapter</b>	<b>Co-existing Operating System and Adapter</b>
OpenVMS V7.1 KZPSA	Windows-NT Alpha V3.51 and V4.0 KZPSA
DIGITAL UNIX V3.2g and V4.0b KZPSA	Windows-NT Alpha V3.51 and V4.0 KZPSA Windows-NT Intel V4.0 (Adaptec)
DIGITAL UNIX V3.2g and V4.0b KZPSA	OpenVMS V7.1 KZPSA

**Note**

Support for homogenous operating system configurations require that all operating system guidelines be followed. This includes the use of clustering and failover software. Refer to operating system SPD and release notes for supported configurations.

Multi-host configurations do not provide shared storage access. A storage device being accessed by one operating system is not available to the other operating system. With HSZ70 (HSOF V7.0), access to a disk unit can be restricted to selected host SCSI IDs.

Configurations of more than two operating systems are not supported with the array controllers.

Minimum version of Array Controller software:

<b>Array Controller</b>	<b>HSOF Version</b>
HSZ70	HSOF V7.0
